

## PRODUCT SPECIFICATION

### ABUS 92 Series Straight Shackle Padlock

The straight shackle design makes the lock slightly less versatile but invariably more secure against force attacks. It is also encased with a hardened steel body making it insurance approved up to a European CEN standard of grade 3, ideal for protecting valuable stock and business items with a roller shutter.

The straight shackled or shutter padlock can be used in a variety of situations where a high-security padlock is needed but are ideal for security shutters, gates and barriers.

The shackle is made from chrome-plated hardened steel with the lock mechanism constructed of anti-corrosive materials. This makes it ideal for outdoor use.

A 5-pin precision brass cylinder with over 1,000 different locking variations and the hardened steel pin - preventing the slim side of the lock body being sawn through - makes this padlock a true high-security option.
