

## PRODUCT SPECIFICATION

### ABUS 'My Lock' Aluminium Padlock

Although this padlock weighs in at a mere 99 grams you must not be fooled into thinking it is a low security product. A hardened steel shackle makes it highly resistant to sawing and the double bolted mechanism prevents force attacks by pulling.

It is available in six different colours and the vinyl body allows it to be customised with a permanent marker pen.

This lock is ideal as safety lock to secure switching gear or where you need to personalise a lock for identification or to prevent theft if loaning within a gym or sports centre.

The precision 5 pin tumbler with self-locking mechanism make the padlock highly secure against picking, while the hardened steel shackle and double bolted case help protect the lock from force attacks. Both the stainless internal mechanism and the external brass body also ensure the lock will function well outdoors
