

PRODUCT SPECIFICATION

ABUS Shutter Padlocks

The straight shackle design makes the lock slightly less versatile but invariably more secure against force attacks. It is commonly known as a shutter padlock although it is excellent as an all round padlock with the added security of a closed shackle design.

The straight shackled or shutter padlock can be used in a variety of situations where a high-security padlock is needed but are ideal for security shutters, gates and barriers. They are also often used on shipping containers and warehouses.
