

PRODUCT SPECIFICATION

ABUS 74 Series Lock Off Padlocks

ABUS manufacture the best quality and most reliable safety padlocks in the market. The new 74 series is a fully non-conductive padlock with an insulated shackle. The mechanism has a key retaining cylinder to prevent the lock being snapped shut without the key holder present.

Safety Lock-Off padlocks are used to secure machinery, switch gear or valves in the open or shut position to ensure the safety of staff when working on them. They can be used on their own or in conjunction with a number of other locks on a single lock-off hasp.

For added security these locks are only provided with a single key. This prevents two keys being accidentally distributed to more than one person. We do not provide additional keys with this model.

There are 9 colours in the range each keyed alike to a different suite.

Black, Red, Blue, Green, Yellow, Orange, Purple, White and Brown
