

PRODUCT SPECIFICATION

ABUS Stainless Steel Close Shackle Padlock

Although many of our padlocks are designed for use in normal outdoor conditions, this stainless steel padlock is marine grade and capable of withstanding the most extreme conditions including salt water environments.

The shackle is also protected by extended side walls making saw and bolt cropping attacks much more difficult and therefore make it an CEN insurance approved padlock up to grade 3.

The precision 5 pin tumbler with self-locking mechanism make the padlock highly secure against picking, while the hardened steel shackle and double bolted case help protect the lock from force attacks. Both the stainless internal mechanism and the external brass body also ensure the lock will function well outdoors.

Lock Types & Details:
