

## PRODUCT SPECIFICATION

### ABUS Master Key Dial Combination Padlock

The dial combination padlock offers 64,000 possible combinations using a traditional safe style mechanism. This special version functions as a normal combination padlock but can be manually over-ridden using a masterkey.

Each lock is allocated its own combination which is non-resettable. Every lock then also has a unique serial number that allows you to track the padlock to its own combination. Ideal for schools, gyms and where large numbers of lockers are secured.

The Master-Key functionality makes it ideal for schools, colleges and gyms where access may be needed in the event of a forgotten code or in an emergency. The dial design with its larger number of combinations can act as a deterrent to manipulation but retaining the usual simplicity of a combination padlock.
