

PRODUCT SPECIFICATION

ABUS Eterna Laminated Padlock

Laminated locks have a large history and were one of the first padlocks to be produced. They recently lost popularity to brass padlocks due to price and also the problems faced with cheaper laminated products on the market. There are however many factors which make these ABUS locks highly superior to other padlocks on the market.

The other important factor is that each and every steel plate of the padlocks is individually treated whereas all other brands are manufactured and then treated with a standard galvanising process. This basically gives little or no real protection to the weather and especially salt water. During the tests above the ABUS locks came out almost identical with no corrosion marks.

Lock Types & Details:

41 Series Eterna Laminated Padlocks					
ABUS Reference Number	mm	mm	ABUS GPS	Weight kg	Box qty
41/30	35 / 54 / 22	15 / 16 / 5	5	0.130	12
